ASSIGNMENT -2.2

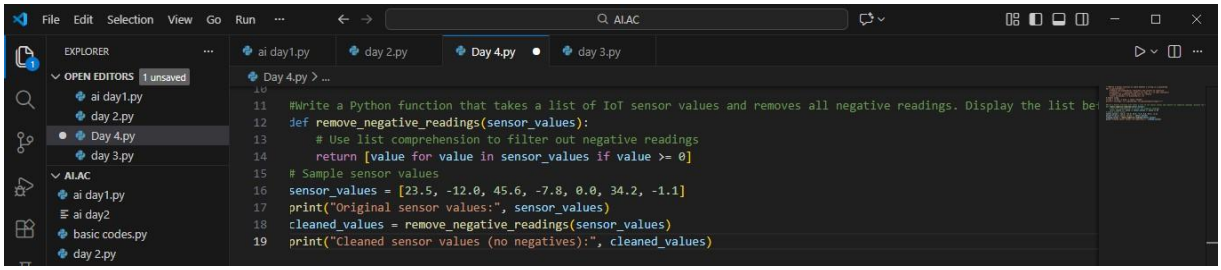
A.NagaKoushik

2403A51L22

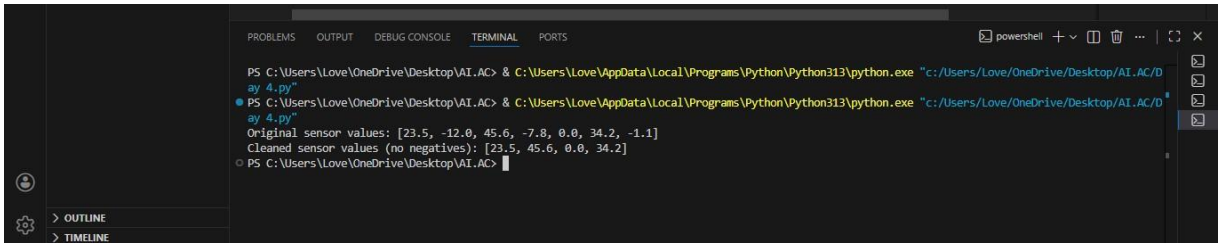
Batch:51

Task 1: Cleaning Sensor Data

PROMPT: Write a Python function that takes a list of IoT sensor values and removes all negative readings. Display the list before and after cleaning.



OUTPUT:

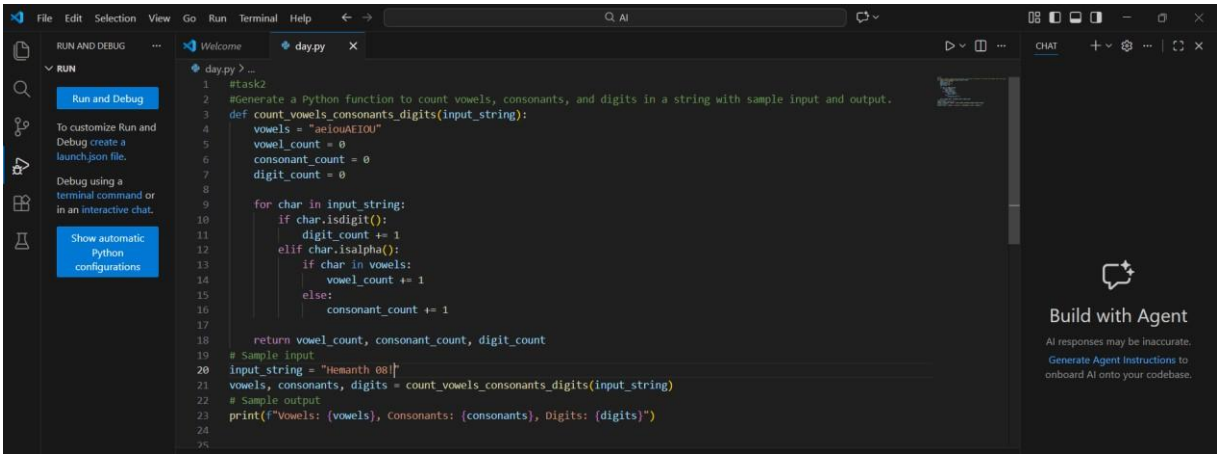


EXPLANATION:

This function removes invalid negative sensor values using list comprehension. Only values greater than or equal to zero are retained, ensuring clean IoT sensor data.

Task 2: String Character Analysis

PROMPT: Generate a python function to count vowels, consonants and digits in a string with sample input and output.



OUTPUT:

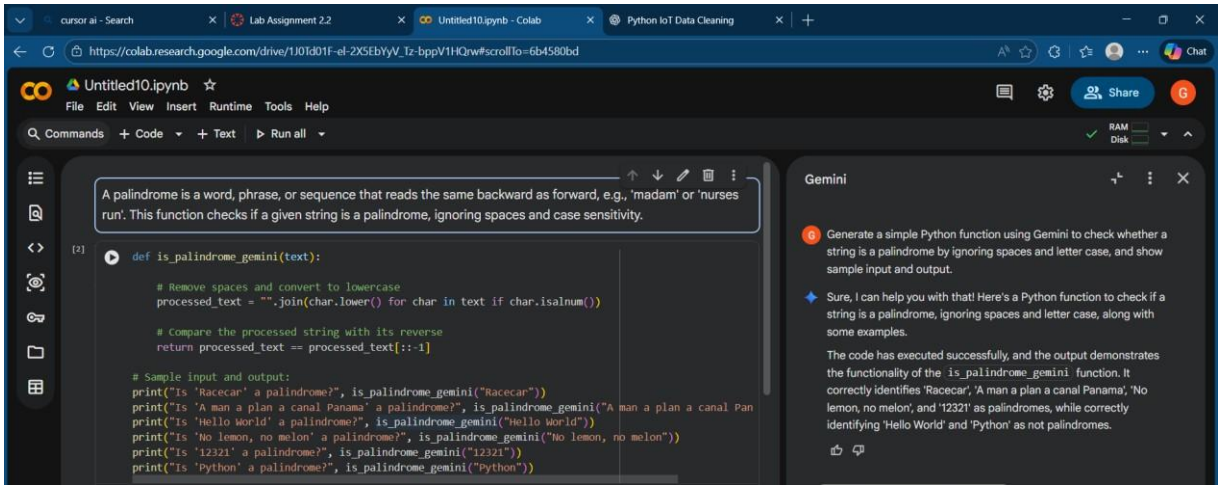
EXPLANATION:

The function iterates through each character and classifies it as a vowel, consonant, or digit.

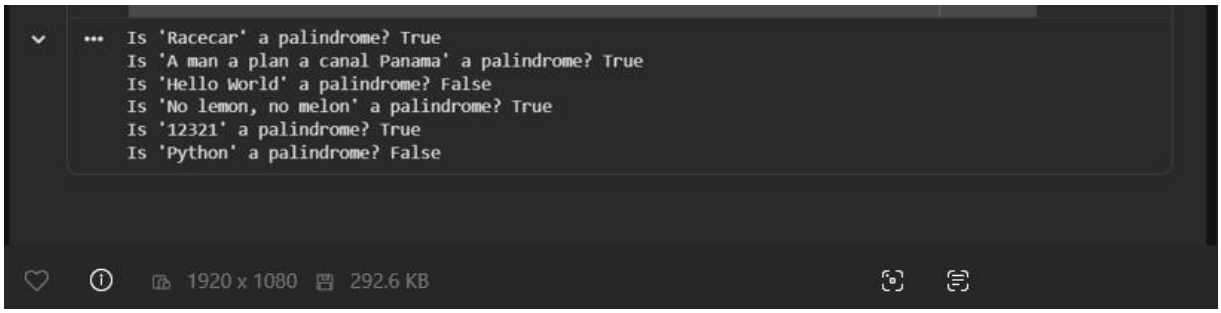
Python string methods like isalpha() and isdigit() improve accuracy and readability.

Task 3: Palindrome Check – Tool Comparison

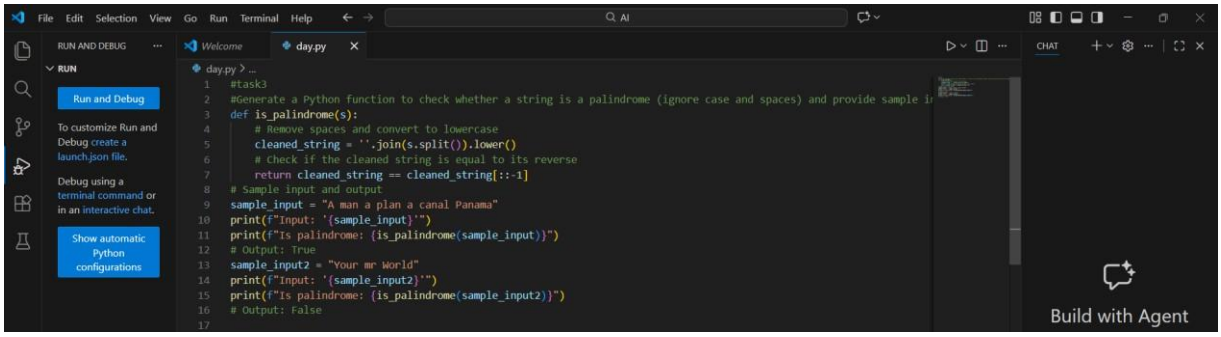
Gemini Prompt: Write a Python function to check if a string is a palindrome. Ignore spaces and capitalization.



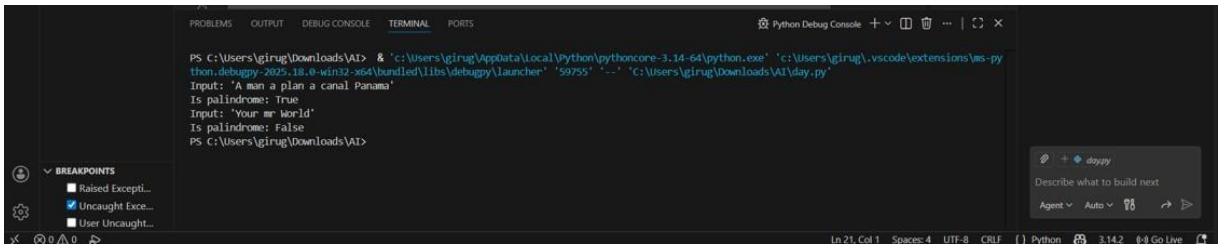
OUTPUT:



Copilot Prompt: Generate a python function to check whether a string is a palindrome (ignore case and spaces) and provide sample input and output.



OUTPUT:



Comparison Table:

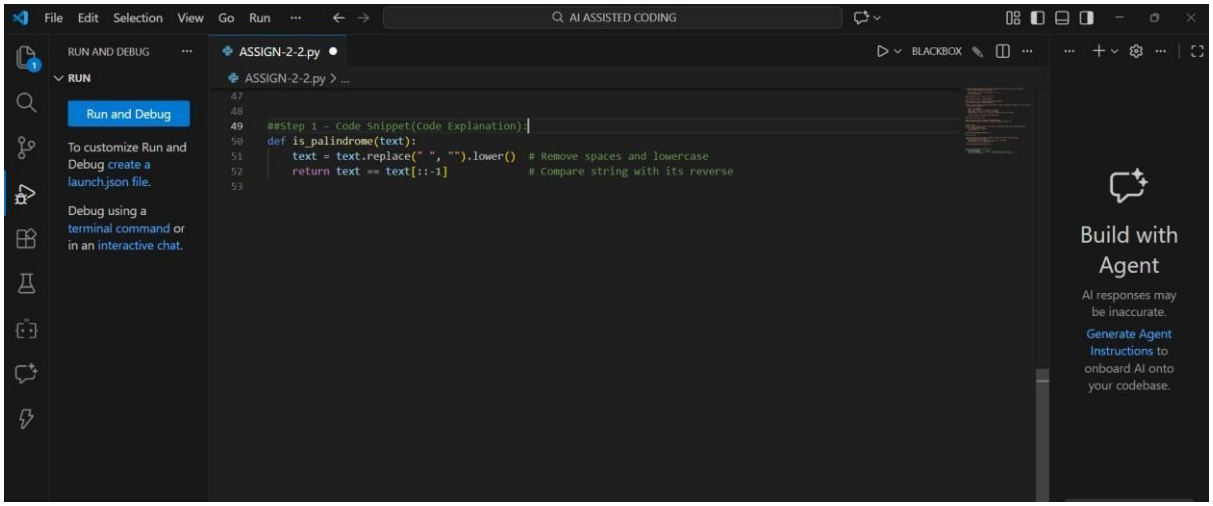
Feature	Gemini	Copilot
Clarity	Simple, minimal code	Slightly longer, more robust
Handling spaces/case	Ignores spaces, converts to lowercase	Ignores spaces and punctuation, lowercase
Readability	Very clear	Clear, slightly more detailed
Efficiency	Uses string slicing	Uses string comprehension

EXPLANATION:

Gemini provides concise and easy-to-read logic, making it beginnerfriendly. Copilot generates more robust code that handles punctuation and special characters.

Task 4: Code Explanation Using AI **Step 1 – Code**

Snippet:



Step 2 – AI Explanation:

1. text.replace(" ", "").lower() → Removes spaces and converts letters to lowercase.
2. text == text[::-1] → Checks if the string is equal to its reverse.

EXPLANATION:

The function normalizes the string to avoid case and space mismatches.
It then compares the string with its reverse to verify palindrome logic.
